

Similarities and differences in the possibilities and limitations, and exploration of the potential synergy of two information-based healing methods, homeopathy and hands-on and distant healing.

With André Saine and William (Bill) Bengston), author of *The Energy Cure* and developer of the Bengston Healing Method (BHM)

Introduction

Both homeopathy and hands-on healing are extraordinarily efficacious, safe and very cost effective methods of healing.

However, both homeopathy and hands-on healing are anomalous phenomena that are ignored or rejected by the scientific world and viciously attacked by skeptics because it doesn't fit the materialistic-mechanistic-reductionist paradigm of the great majority of people considering themselves scientists, which are supposed to be an open-minded people who explore our world without any bias.

Are there any links between these two approach to healing?

Hahnemann, the founder of homeopathy, was contemporary to Mesmer and used Mesmerism with his patients.

The Austrian physician Franz Anton Mesmer (1734-1815) was a reformer of medicine who was to first propose an alternative to the practice of heroic medicine for the prevention and treatment of most human ills by reviving the ancient practice of hands on healing.

He believed that the immediate causes of *all* diseases, internal or external, presuppose a defect or irregularity in the flow of energy.

Even though Mesmer said that his method was applicable to all diseases not all were curable through it, "For although it can be said that the application of magnetism is sufficient to cure all kinds of diseases, it would be foolish to claim to cure all sick individuals in the same way."

Mesmer also said that he had found through experimentation that humans could be in contact with each other at great distance,¹ a phenomenon observed in quantum physics as nonlocality.*

On the one hand, some of the discoveries of Mesmer have led to hypnotism, Freud and the discovery of the unconscious.

On the other hand, hands-on-healing has been continuously used since Mesmer.

And today two centuries later we come to Bill Bengston, a man who has made the greatest advances in hands on healing since Mesmer.

Who is Bill Bengston?

Aside from having been a professor for 40 years of sociology and advanced statistics at St. Joseph College in NYC, he has also been the president of the Society of Scientific Exploration for a number of years, Bill was the right person at the right time.

First, Bill is a rare kind of scientists for today's standards, not because he is a very inquisitive person, but especially because he didn't let bias and prejudices influence his exploration of our world.

One of Bill's missions is to understand healing.

Bill's discoveries

Perhaps, one of the best ways to describe Bill is to go over some of his accomplishments and discoveries that he has made:

* Nonlocality was first described by Einstein as "spooky actions at a distance." Nonlocality is described in physics as the apparent ability of objects to instantaneously know about each other's state, even when separated by large distances (potentially even billions of light years), almost as if the universe at large instantaneously arranges its particles in anticipation of future events. "Thus, in the quantum world, despite what Einstein had established about the speed of light being the maximum speed for anything in the universe, instantaneous action or transfer of information does appear to be possible." (The physics of the universe. Nonlocality and entanglement.
https://www.physicsoftheuniverse.com/topics_quantum_nonlocality.html)

First, Bill continued in a most brilliant way McGill biologist Bernard Grad who did pioneering work on hands on healing in the ninety fifties through the seventies and as well the one of Douglas Dean on the property of water treated by hands on healing.

Bill has made a great number of pretty interesting discoveries, and to name a few:

Bill confirmed what Grad had already observed is that skeptical medical students slowed down the healing process.

Bill was able to observe a few hundred people with serious diseases healed with hands on healing.

Bill developed the cycling method with Bennett Mayrick.

His discovered that healing of cancerous mice was predictable and shown success in healing malignant tumors in humans.

In the few thousand papers on the animal model that he used mice had never lived beyond the 27th day, but with hands on healing they not only live with few exceptions beyond the 27th day but live the normal life of mouse afterward.

Experiments were repeated a number of times in multiple respectable labs.

He discovered that the cured mice were immune for the rest of their lives to develop cancer after another injection of 100,000 cells and human who have been cured remained permanently cured.

The more aggressive is a malignancy and the younger is the sick person, the quicker the healing and disappearance of the malignancy.

Even in the control group of mice in another building recovered but only after being visited once by one of the active healers.

However, the growth of cancerous cells, not attached to a host, will be fostered through hands on healing by 600% in a very short time.

Sick mice *always* move toward the left hand of the healer. Once healed, mice don't care about the healer anymore.

Cells from a healed mice transplanted into a cancerous mice will heal the recipient mice.

Bill found out that healing could be taught.

With minimal training, inexperienced volunteers could heal cancerous mice.

He clearly confirmed that the more numerous is a placebo group the greater the placebo effect.

He has also confirmed that separation in space even at great distances doesn't mean separateness or independence from each other.

Entanglement likely exists beyond the subatomic level.

That on EEG, the brain of the healer and healee can be synchronized even at long distances.

Bill found out with fMRI that multiple centers of the brain are activated during healing and it can be turned on and off.

When an enveloped had the hair or an image of an animals that was 600 miles away the brain turn on and off depending on the content of the envelope. It turned on when the envelope was one about a sick animal and these far away animals ended up being cured.

There is a resonant bond between healer and healee in a fluid connection (not unlike what Mesmer had said).

Healing is not based on conscious intention.

Insensitive people heal as fast as sensitive people.

Healing is not a psychokinetic effect.

Perhaps, most importantly is all healing, as life, is a selfish process: "I need to breathe," "I am thirsty and need to drink," "I am hungry and need to eat," "I need to reproduce," and similarly the power of healing is somewhat based on *pure selfishness*.

Random number generators and geomagnetic probes can be influenced during a healing session.

Recorded ambient magnetic and electromagnetic signals during a healing session in a special cage of Faraday which was used to treat cancerous mice, but I believe was less successful, as there was only a trend of tumors slowing down growth at day 28 (when the mice were exposed to this signals 4h/d), which made you concluded, “There is evidence of a “loss of signal” when the recording is used. ... Whether this might be due to the limitations of recording technology or information outside the normal electromagnetic field spectrum remains unknown.”

Put cells in incubator that cell had been under the influence of the recording and healing still happens

The healing influence can be stored in organic matter (i.e., cotton or live tissues) and inorganic matter (i.e., water) and can be transfer from there on.

Water was fed to cancerous mice, which resolved in the same pattern as if they had been treated by hands-on techniques. —2020

“The simple reality is that the number of people needing or desiring healing far exceeds the number of healers who can deliver healing services. If healing by intention is ever to become widely available to all those who need it, then the development of *a reliable scalable system of delivery will become necessary. Central to this quest will be the development of a technology that can “store” healing and administer it on demand.*— 2021

At the suggestion of homeopath, he has processed treated water through succussion and repeated dilutions.

Eighty-six volunteers from the US agreed to take two sublingual drops four times/day for eight weeks, with detailed self-reports coming in every two weeks. Participants reported on their progress using a variety of metrics designed to gauge changes in physical, emotional, and spiritual wellbeing. We found *statistically significant improvements in all indicators of wellbeing*, with the largest improvements found at earlier time periods. —2021

In a third experiment: Ninety people participated in this study, and each agreed to take

two drops under the tongue, four times a day.

We were deliberately targeting volunteers who had serious health concerns. Of the 90 volunteers, *78 (87%) reported that they had a serious illness*. A partial list of primary conditions includes Multiple Sclerosis, spinal stenosis, bi-polar disorder, hyper and hypotension, celiac disease, kidney disease, fibromyalgia and chronic fatigue, dementia, psoriasis, Lyme disease, heart conditions (including congestive heart failure), chronic hepatitis C, arthritis, Hashimoto disease, diverticulitis, hypothyroidism, Tourette syndrome, diabetes, hearing loss, chronic pain, allergies, low testosterone, sensory processing disorder, ALS, lymphoma, metastatic cancers, tinnitus, lupus, chronic lung disease.

41% reported improvement at 2 weeks, 54% reported improvement at 4 weeks, 51% reported improvement at 6 weeks, *59% reported improvement at 8 weeks*.

We asked for self-report data on whether there had been a change in non-primary “other” health conditions at each of the two-week intervals.

63% reported improvement in other conditions at 2 weeks, 71% reported improvement at 4 weeks, 68% reported improvement at 6 weeks, and 56% reported improvement at 8 weeks.

Preliminary distribution of the new formulation produced seeming positive effects that we had not seen previously. To take one example, Parkinson’s patients given the formulation by multiple administrators reported improvements with effect sizes more dramatic than previously observed using our various cycling healing methods. Patients with neurological conditions such as bi-polar disorder reported dramatic and lasting improvements, seemingly with larger effect sizes than previously reported. —2020

He tested a physical device to reproduce the proven effects of the successful water.

Importantly, these effects were comparable whether the water was produced by the dilution and succussion methods found in the first clinical experiment or by the physical device designed to mass produce the treated water.

Etcetera, etcetera, etcetera.

I know that is much more to say about all you have explored and discovered.

Perhaps you want to share something important that I have missed especially related to one of your latest findings.

What is the healing influence, a complex of energy and information?

Preliminary concepts:

One of the goals of this investigation is to see if we are dealing with energy, information, a complex of energy/information, etc.

Any conversation about energy healing must be based on mutual understanding of basic concepts, which include the ones of energy, information, field, force and vital force.

In the mechanistic view of biology, it is considered that biological events are reduced to physico-chemical phenomena and so is energy.

For instance, in photosynthesis, light energy is converted into biochemical energy, which becomes the basis of innumerable biological processes.

However, this basic form of energy can't explain the *amazing degree of organization, unity, intelligence and harmony that exists in living organisms*, which include the capacity to heal themselves, and which has led philosophers, scientists and physicians of all times and traditions to conceptualize the existence of a *innate harmonizing vital force*.

The concept of a vital force is central to traditional and alternative medicine, and is probably the feature that distinguishes it most from conventional medicine, which is based on a mechanistic and reductionist view of biology. Many of the alternative medical practices, and principally homeopathy, acupuncture, manual therapy and especially hands-on-healing, are based on the capacity of the physician to directly influence this vital force for the restoration of health.

The concept of the vital force may appear as magical thinking for outsiders, however for practitioners of the healing arts that are based on harnessing the healing powers of the organism this enduring concept is an *extremely useful, pertinent and practical working hypothesis*.

One of the most compelling sets of evidence that supports the existence of a vital force comes from the great number of scientists who were led to independently postulate from their research specifically in embryology and ontogeny that there must be a “mechanism the outcome of whose activity is ‘wholeness,’ organization and continuity.”²

Energy is a theoretical term in physics for that what is able to change something or the capacity for doing work. It may exist in potential, kinetic, thermal, electrical, chemical, nuclear or other forms.

Energy can be neither created nor destroyed. It can only be transferred and changed from one form to another.

Energy can be measured and transferred, which implies a loss of energy at the source for a gain of energy in the recipient.

However when energy is exchanged between two systems, information is also exchanged.

But information is not energy.

Information can be processed, organized and structured data or what is conveyed or represented by a particular arrangement or sequence of things.

Information can be encoded into various forms for transmission and interpretation (for example, information may be encoded into a sequence of signs, or transmitted via a signal or DNA). It can also be encrypted for safe storage and communication.

The transfer of information from one system to another can be done *endlessly* and without any diminution at the source.

“Healing itself can be seen to be "informational" in nature and presumably transmitted to the healee through an energetic process not yet understood.” BB

Perhaps energy contains information in it and every other object in the universe has an information related to it. But its not the other way round, information doesn't contains energy.

Information can be thought of as the resolution of uncertainty that manifests itself as patterns.

An organized system needs information and is in needs of information when moving into disorganization.

The concept of information can become synonymous to the notions of *pattern* and entropy.

Harmony (coherence (order connotation) and balance connotation) is a difficult term to define.

In physics, a field is a region in which each point is affected by a force.

One of the fundamental concepts in physics is the one of a force, which is defined as any influence that tends to change the motion of an object.

Is healing associated with information that conveys a pattern of harmony?

Is healing about greater harmony of living processes?

Is healing influence about shifting the activity of the vital force on the spectrum of harmony or disharmony toward greater harmony through the transfer of information rather than energy?

Similarities between Bengston Healing Method (BHM) and homeopathy

- Both enhance the natural innate healing power of the living organism.

-Both are dose related.

-With both approach we observe a general response of improvement in energy, moods, cognitive functions, sleep, digestion, menses, body temperature regulation, etc., aside from the chief complaint, i.e., pain, inflammation, autoimmunity, cancer, infection, etc., and decrease and disappearance of fears and anxieties, anger, grief, nightmares, etc.

-In homeopathy we are looking at not less than 15-20% and usually between 40-80% at the first follow up after the intake of a remedy with a high degree of similarity.

- Both can have paraphysiological effects: that is faster than when left to Nature, i.e., bruises have a set healing time which goes through the colors of the rainbow in a certain amount of days

- However I want to point that some healing effects in hands on healing or energy healing or spiritual healing that can be supraphysiological, such as phenomenal recoveries with immediate disappearance of an infirmity or life threatening condition, which Harry Edwards, a very famous spiritual healer reported that occurred about 10 times a day.
- Like a child that is crooked with a severe scoliosis from cerebral palsy regaining function and walking straight within minutes across the room.
- 80% of people experience some benefits which are usually related to incurable conditions, i.e., malignancy, glaucoma, schizophrenia, TB, epilepsy, stammering, blind and deaf children, chorea, etc.
- For instance: a lady who had suffered from extreme spinal deformity resulting from tuberculosis of the spine and had been helpless and bedridden from the age of three and at the time of her healing, when she was thirty years old, she weighed only thirty-five pounds. She was carried to one of Mrs. Salmon healing session, and received only one treatment from her. Two days later she felt a remarkable change taking place in her body. Her spine straightened, the deformity considerably diminished, and she was able to move her legs. It is said that, as her body responded at this time, loud cracking noises were heard as joints became freed and the stiffness were overcome, and her body length increased by seventeen inches.

- Both methods we can influence enzymes, cells in the laboratory, fungi/yeasts, bacteria, plants, single-cell organisms, and animals that have been subjected to controlled study

-Both methods are dose response curves

-The role of belief or conscious awareness on the part of either the healer or healee is not necessary, as we have the same result if not better in people who don't know they are treated (i.e., unconscious) or infants or animals or plants.

-“It turns out that subjectively less sensitive people can heal just as well without ever experiencing connection.” B.B.

-In homeopathy the more sensitive a person is the greater seems to be the need and the greater is the response to a remedy with a high degree of similarity.

-The more aggressive is the malignant process in mice being treated, the quicker the curing effects.

-Both can store of their healing influence.

-There is no perishable date for homeopathic remedies

-There is a possibility there exists a time enhancement factor (Luc Montagnier)

-Both are dependent of the skill of the practitioner.

-However the acquirement of skills in homeopathy is a lifetime activity, like any art.

-Healing occurs only if there is a need.

-“After an injury, the sooner the patient was treated, the faster and better the results were the longer a patient had had a condition, the longer it took to cure.” BB

-“Younger patients with generally good health were easier to treat than older patients with multiple conditions.” BB

-BHM: “Negative emotions could interfere with healers’ ability.”

-In homeopathy: people with pessimistic and negative personality don’t do as well as positive and optimistic ones.

Differences

-BHM: non-specific healing influence.

-Homeopathy: very specific to an individual

-The healing response in homeopathy will vary from one individual to another. When we have a natural healer as a patient the healing response can be phenomenal.

-In homeopathy, the potency and frequency and way of administration of the remedy depend on the sensitivity of the patient, the acuteness of the problem (need) and whether they are healers.

- The higher the potency the greater the patient's reaction to the remedy.

- The original substance of a remedy contains a specific information but the potency of the remedy will depend of its potency (energy ?)

-BHM: Non-linear: there is a sudden phase transition.

-“Healing proceeds in a non-linear fashion with sudden bursts of healing that resemble ‘phase transitions.’ ” B.B.

-Homeopathy: linear as long as potency, repetition and way of administering the remedy are optimal.

- The potency of the remedy must be changed on an ongoing basis, usually increased in potency ad infinitum.

- Instant healing is very rare in homeopathy in patients with chronic problems.

-In homeopathy the response is continual with proper dosing and follows a very particular and predictable curve, which begins with a short lasting aggravation that is followed by a prolonged and general improvement.

-“Sometimes an initial aggravation of symptoms would occur, prior to cure.” BB

-Homeopathy: Keep the pathogenic properties of the original substance and we can “imprint this properties” or “information” which can be *multiplied* and *potentized* ad infinitum.

-Which implies that the homeopathy remedy contains information that can be *potentized*.

-Homeopathy remedies have a field like the original substance, which sensitive people can experience at great distance or crude substances (ipecac, jaborandi) at a distance through doubly sealed vials (Bourru and Bourot)

-This influence diminishes with distances in homeopathy.

With BHM: there is nonlocality* which implies that the healing influence has no relationship to distance.

- Healing appears to be fundamentally about "information" despite the popular belief that it is related to "energy."
- "Since healing apparently does not diminish with distance, that power source must be global in reach." B.B.

- It is not destroyed by extreme heat (-200 to +450 °C) but it can apparently be destroyed by microorganisms, microwaves, x-rays (above 5000 rads) and cell phone signals. (Similar to Douglas Dean's experimentation which showed that healing water has been distilled kept its properties.)

-Homeopathy can be used preemptively, that is for prevention, i.e., such as before any event that could be stressful, challenging of adaptation for the organism, including

- before a surgery to limit shock and bleeding
- infectious diseases,
- grief,
- removing or preventing the effects of a diet deficient in certain minerals
- public speaking,
- overworking,
- loss of sleep,
- motion sickness,
- etc.

Excellent to one of the best option of treatment:

* Nonlocality was first described by Einstein as "spooky actions at a distance." Nonlocality is described in physics as the apparent ability of objects to instantaneously know about each other's state, even when separated by large distances (potentially even billions of light years), almost as if the universe at large instantaneously arranges its particles in anticipation of future events. "Thus, in the quantum world, despite what Einstein had established about the speed of light being the maximum speed for anything in the universe, instantaneous action or transfer of information does appear to be possible." (The physics of the universe. Nonlocality and entanglement.

https://www.physicsoftheuniverse.com/topics_quantum_nonlocality.html)

- Acute and chronic infections
- Allergies and hypersensitivities
- Autoimmune conditions

BHM:

- Close to 100% predictability to heal aggressive cancer
 - Create cancer immunity in the healee
 - Alzheimer
 - Cataracts
 - Inflammatory conditions
 - Depression, even the most severe
 - Bipolar disorders (water)
 - Tell me if I am right with hands on healing you notice a specific effect, while with the healing water you noticed a non-specific effect.
 - “The current interpretation is that ‘bonding’ can occur between mice that were just briefly seen by volunteer healers and other mice that actually received healing treatment.” B.B.
 - “Thus, members of a bonded mice system can receive the healing treatment given to an individual mouse within that system.” B.B.
 - “The control group was tainted once the students found the control mice.” B.B.
 - “When the experiment ended, the mice treated by the non-biology students were cured, but the mice treated by the biology students had died. In the other room, the control mice were dying as expected until they were seen by the biologists, who apparently could not cure their own experimental group mice!” B.B.
 - “But *all of the home mice were cured.*” B.B.
 - “Further speculation involves a timeless and spacelessness ‘Source’ in which the unconscious and intangible merge.” B.B.
 - “Successful healing is associated with “connection,” and healing failure is associated with ‘disconnection’.” B.B.
 - In homeopathy, healee is independent of the practitioner but the bond is with the remedy.
- “*To my knowledge, no person I have healed has ever experienced a re-occurrence.*” BB
- In homeopathy we are confronted with relapses.

Limitations

-BHM:

- slow growing and benign growth
- RA: not impressive.

For homeopathy: problems related to lifestyle, i.e. essential hypertension, type II diabetes, Alzheimer, etc.

- Recent inroad into the reversal of genetic disease: retinitis pigmentosa (not known to be reversible), cystic fibrosis
- But once the tissue changes are present with can help improve function: i.e., degenerative diseases due to atherosclerosis (intermittent claudication, angina), spinal and foraminal stenosis, exostoses, Parkinson disease, prostate hypertrophy.
- We can get fair response with
 - o Heart failure
 - o Kidney failure
 - o COPD

-Mineral deficiencies in grazing animals on depleted soils (therapeutically and preventatively)

-Cerebral palsy (slow but sure with the help of manipulation)

-Guarded:

- People with addictions without any support system and environmental changes
- Cancer especially stage IV in an elderly person
- Old age dementia
- Old cases of psychosis, with a long history of having been heavily medicated
- Destroyed tissues:
 - Joint regaining function = more rare.
 - Fingers growing back: rare but possible
 - Tooth enamel destroyed = rare but possible.
 - Celiac disease
 - Myopia
 - Late MS
 - Mechanical problems: i.e., Acromegaly reversal with manipulation

-Clear limits:

- Reversal of ALS
- Reversal of genetic diseases with 100% penetrance, such as Duchene muscular dystrophy
- The regrowth of limbs (with two exceptions, one with homeopathy and one with hands on healing)

For BHM: ???

- When something need to be removed: Alzheimer : good.
- Missing: no cure, i.e., type I diabetes, Parkinson
-

Questions:

-While playing tennis, you twist to make a great shut, hear a crack in our knee and fall to the ground with great pain. You know you have injured meniscus and ligaments, what do you do?

-Before meeting Bennett Mayrick in 1971, can we assume that you were already destined for the investigation healing, as you had already done a reasonable amount of reading on the subject. When, how and why you were interested in healing originally?

-What differences in healing have you noticed between hands on healing and the use of healing water?

-Is the healing potential of charged water exhaustible?

-How long does healing water or cotton keep their "power"?

-What is the minimum effective dose of treated water?

-What is the minimum time for treated water to gain its healing influence?

-What is the best way you have found to recognize and measure when has been captured in healing water?

-Have you done more research on the oxygenation of water by holding it for several minutes?

-If we would mix a few drops of healing water into a larger container of water, would it communicate its healing influence to the rest of water without losing its potency?

Once healed of a malignancy, does a healee ever get sick again with something else?

Do the healer ever get sick?

-Have you tried to record or capture what goes on between the two hands of the healer?

-What part did the fellows play in the development of the cycling?

-In the first mice experiment when you had to replace Ben Mayrick how was the cycling different than the one you use today?

Have you been able to explain how in your first two mice experiments the control mice began to improve only when the protocol was broken and the active healer visited the mice?

How do you reconcile this phenomenon with the one that the mice that were in a far away city never healed?

If you are cycling with mice and you stop cycling but keep your hands along side of the cage do the mice move away from your left hand?

Have you tried to put someone without any cycling or any other training to just put their hands along the cage of sick animals?

Do the mice still go to the left hands.

In your Energy Cure book, you wrote, "So many questions ... Over the next few years, I hope to find some of the answers." How much have you done and how much more

would like to do?

As a physician can I cycle the image of patient having recovered health?

Any clue on involving patients and seeing themselves being healed?

Have you found as in other healing practices that multiple healers make a difference?

Do some materials block the healing effects?

What are your thoughts on the fact you noticed no changes in Parkinson's or bi-polar disorder patients with hands on healing but noticed them with healing water?

In your latest experiments with charged water, do the healee relapsed once they stopped using the water?

You mentioned that a substance can be negatively charged, any way to measure this?

Have you or your students tried to charge crystals?

You mentioned that treatment is often good for the wellbeing of the healer but does the healer ever get drained from doing healing?

Once healed can immunity be transmitted through inheritance?

A patient presenting with an aggressive fast growing lung cancer, a slow growing not too aggressive skin cancer, uterine fibroids, cataracts and myopia, do all five of these conditions affected at once? Or in what order?

I noticed in a later research you began introducing "hand processed succussion and dilution." (2020 —*A clinical social experiment of device-infused resonant water*), what are conclusion of this process?

You also wrote, "Preliminary distribution of the new [diluted and succussed] formulation produced seeming positive effects that we had not seen previously. To take one example, *Parkinson's patients* given the formulation by multiple administrators reported improvements with effect sizes more dramatic than previously observed using our various cycling healing methods. Patients with neurological conditions such as bi-polar

disorder reported dramatic and lasting improvements, seemingly with larger effect sizes than previously reported.” (2020—Energized Water Study)

Any clue how different is extremely rapid cycling compared to a person who review their life as if a film is being unrolled at an incredible speed during a near-death experience. Actually a recent article show that as a person is dying many brain waves shut down but their is an increase power of the gamma waves, which are the fastest brain waves, similarly as the ones you picked up in the fMRI.³

-How much the state of the healer influences the healing influence?

Can a healer heal him or herself? What about with treated water that he or she charged?

What have you tried to involve patients to cycle for self-healing?

Anecdotally, people have reported that the drinking of treated water has seemingly resolved leukemia and irritable bowel syndrome, to name but a few examples. Do you have any more findings?

Aside from Ben mayrick, have you or anyone tried to dissolve clouds? What is the meaning?

Have you noticed variability from one healer to another?

On page 206 of the Energy Cure, you wrote, “My only clinical failures occurred with patients who had received radiation or chemotherapy.” What this based on facts or beliefs? Any changes with this passage?

In 2017, in a Higherside podcasts you said that people after a two-day training session people can cycle *several thousands* images per second at least, was that a lapse? 23.45 Any new findings about dose necessary to produce a remission?

Exploration of potential synergy between the two healing approaches

- Could the knowledge accumulated for over two centuries by the homeopathic community have any relevance to your work, particularly on the potentization and preservation of the healing properties of homeopathic remedies?
- By using the most reliable method to know the healing potential of our store influences, it would be interesting to subject healing water to the fluxion method?
- Demonstration of Bernardt Fincke*'s fluxion method (the term fluxion means the action or process of flowing or moving continuously, which was a term used in mathematic by Isaac Newton to indicate the function corresponding to the rate of change *in time* of a variable quantity or a derivative or the measurement of the *infinitely* small).
- Incidentally Fincke found out that it is almost impossible to destroy the healing properties of a remedy above the 30C potency.
- We can store our remedy and are apparently stable at extremely high temperature and very low temperature but can be destroyed by microbial activity cell phone signals microwave and x-ray after 5000 rad accumulation.
- *Would fluxion increase the potency of healing water?*

Last words:

You said, "I can't imagine someone not wanting to learn how to heal (except it is pain in the butt to learn it.

"I can't imagine not practicing it, even outside of the healing realm."

"As the 20th century was the time during which the equivalence between matter and energy was found, perhaps the 21st century will be the time for the discovery of an equivalence between energy and information along with other undreamed technologies

* Bernardt Fincke (1821-1906) was a mathematician who was healed on his deathbed of typhoid fever through homeopathy. After his recovery, he became a physician and dedicated his life to homeopathy and particularly to the potentization of remedies.

and applications.” B.B. (2019—*Examining Biological and Physical Correlates to Anomalous Healing*)

Incidentally, Christian Van den Broeck, a physicist at the University of Hasselt in Belgium, described in *Nature Physics* (and in an accompanying article⁴) the result as “a direct verification of information-to-energy conversion.”

He speculates that molecular processes occurring in nature might already be *converting information to energy* in some way. “The message is that processes taking place on the nanoscale are completely different from those we are familiar with, and that information is part of that picture.”⁵

If you have not read his book *The Energy Cure*, get it and read it. It is book that is difficult to put down” highly recommend everyone to read his book, *The Energy Cure*: <https://bengstonresearch.com/publications>

And to either take a workshop with Bill: <https://bengstonresearch.com/workshops>
The next one is one week from now on ZOOM out of Germany: on March 25-27, 2022

Or get the CD set on *Hands on Healing* : <https://bengstonresearch.com/publications>
Or in different languages: <https://bengstonresearch.com/faq>

Which can incidentally be found on Audible for US residents, which will permit you to listen to it on your phone, tablet or computer.

Listeners desirous to find a practitioner competent to practice BHM you can contact Bengstonresearch at <https://bengstonresearch.com/contact>

All invited to check the Society for Scientific Exploration whose scientists are not afraid to acknowledge anomalous phenomena, see: <https://www.scientificexploration.org>

What do you know about the **Association for the Scientific Study of Anomalous Phenomena**
